1. Source network $\mathcal{H}$

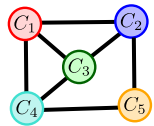

Small network
$|\mathcal{V}^{\mathcal{H}}| = k$

2. Target network $\mathcal{G}$

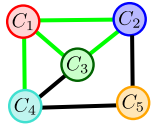

Large network
$|\mathcal{V}^{\mathcal{G}}| > |\mathcal{V}^{\mathcal{H}}|$

3. Clustered network $\tilde{\mathcal{G}}$
(Same cardinality as $\mathcal{H}$)

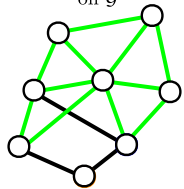

$|\mathcal{V}^{\tilde{\mathcal{G}}}| = k = |\mathcal{V}^{\mathcal{H}}|$
Clustered via $\mathcal{L}$ Eq.(23)
and cluster CC Algorithm

4. Optimized clustered network $\tilde{\mathcal{G}}$

Optimal DoS levels for clusters $\tilde{\mathbf{w}}^{\star}$ Problem 2

5. Lifted back solution on $\mathcal{G}$

Approximation to solution of Problem 1 (Problem 3)

Small GW value $\mathrm{t}^{\star}(\mathcal{H}, \tilde{\mathcal{G}})$

Use optimization $\mathbf{w}^{\star}$ from $\mathcal{H}$ Problem 1
